

Turning your waste into energy -

WT5 Heater Unit

The WT5 is the smallest of the double pass heat exchange models and is a fully exempt appliance to burn chipboard, MDF, hardwood and softwood off-cuts without the need of a costly afterburner, even in city centres and built up residential areas.

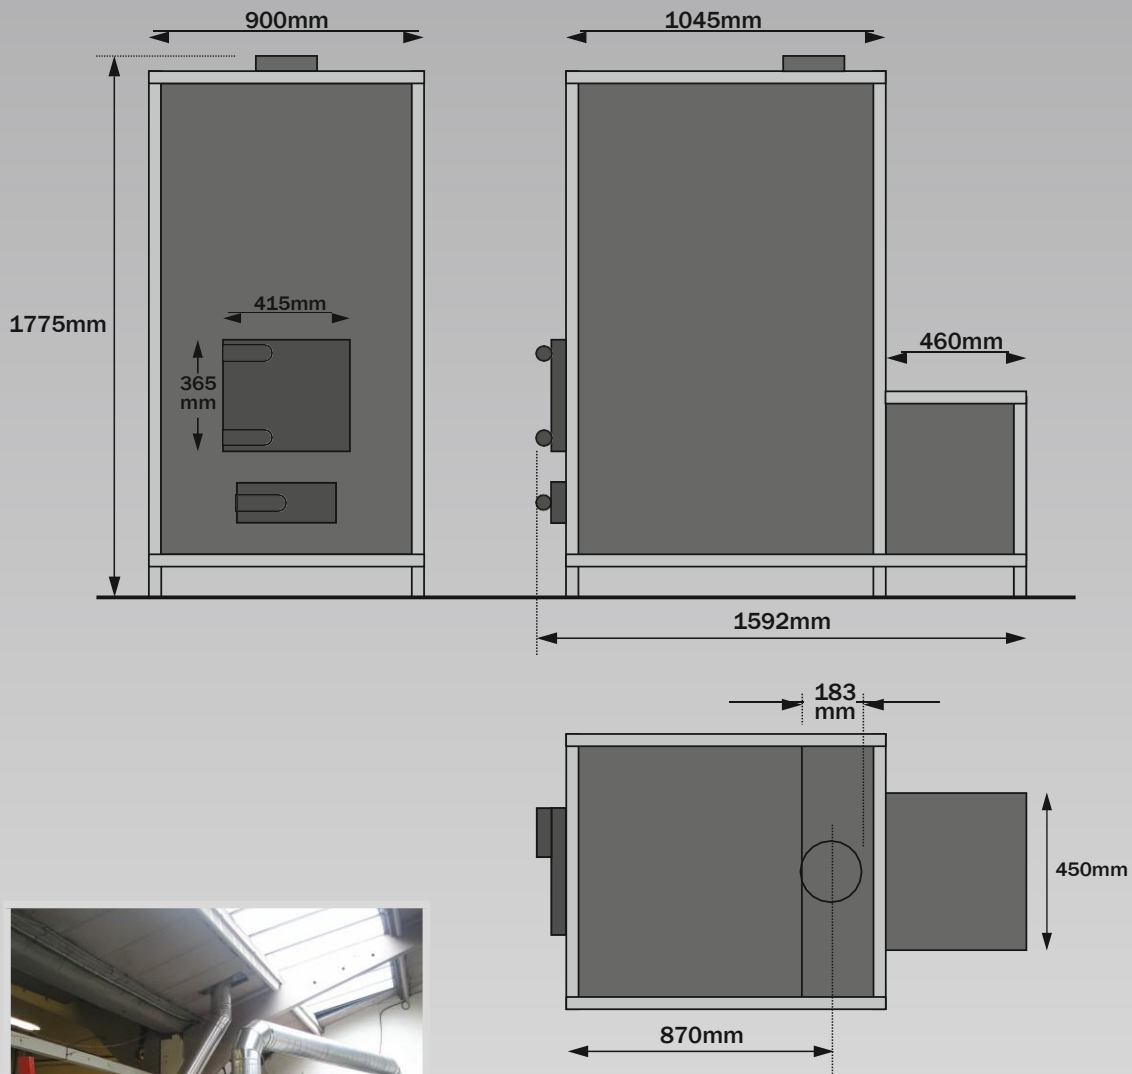

With a full refractory lined firebox and highly efficient double pass heat exchange with fully welded heat recovery fins the WT5 producing over 150,000btu/hr is the ideal heater for a workshop up to around 4000ft².

The WT5 will burn approximately 400 – 650 kg per week depending on type of fuel.
